

# XERO PARTNER EDITION

## THE FUTURE OF ACCOUNTING

Xero is the award-winning online accounting system used by thousands of businesses around the world. Designed and built to enhance and strengthen the relationship between accountants and their business clients, Xero represents the future of accounting. Xero Partner Edition is the entire system you need as an accountant to provide the range of services your clients expect from you.

### YOU'RE IN CONTROL

Xero Partner Edition is only available to accountants, and provides you with the tools and security you need while working with your clients' valuable data. With two carefully crafted roles, Managed Client and Cashbook Client, you have absolute control over the depth of access you wish to grant to your clients.

For those clients that aren't yet ready to code their accounts, the Managed Client role simply allows them to add comments against each bank transaction. And as they become more confident, you can instantly enable Cashbook Client access, providing an easy to use cashbook. Meanwhile, as the accountant, the full power of Xero is still at your disposal, including Debtors & Creditors, Assets & Depreciation, Management Reports and Annual Accounts.

### DIRECT DAILY BANKING

With automated daily bank feeds from major trading banks, you no longer have to chase down missing bank statements, costing you time and money. Every transaction from the clients bank accounts are automatically collected from the bank overnight and updated into Xero, so keeping on top of Bank Reconciliation is easy, sales tax is always up to date, and year end accounts are a breeze. Regardless of the number of bank accounts or transactions your clients have, everything is included in the monthly subscription, making it simple for you to build a fixed fee, value-add service.

### ONE VERSION

Using Xero means you and your clients never have to worry about installing or updating accounting software again. Since Xero is online, everyone uses the same up to date version, so you can confidently model cost effective and efficient business processes with the knowledge that they'll work everytime for your staff and clients. Since Xero is regularly updated with new and improved functionality, you and your clients automatically and immediately get the benefits without any of the hassle. And when your clients are ready to manage their invoicing themselves, you can simply upgrade them within Xero, with no awkward, time consuming data transfer required.

### COLLABORATION MADE EASY

Finally you and your clients can easily work together on how their business is performing, without wasting time moving data back and forth from their office to yours. With depreciation and manual journals available just to you, the financial situation of the business is always up to date, meaning you and your clients can focus on what the numbers mean.

You understand how important it is for your clients' accounts to be up-to-date, but sometimes they get stuck and need your help. So at your discretion, Xero puts your details on the help menu, so that your clients can quickly contact the correct allocated person in your practice for assistance. After all, that's what you expect from the world's easiest accounting system.

### FROM AN ACCOUNTANT'S PERSPECTIVE

Baubre Murray, director of Dowse Murray Chartered Accountants, says Xero Partner Edition is perfect for her clients, especially the ones that are bank-statement driven.

"All of our clients have come back to us and said they find it easy to use. We're confident in our clients using Xero Partner Edition because there are no worries about backing up or keying errors."

"Also, it's cost-effective as the subscription will cover a lot of the time that we wouldn't usually be able to charge for - all that time that we usually spend on tidying up our clients' books."
